

Re: Anti-A, Anti-B, Anti

To Whom It May Concern:

All these products are ones in which the OSHA Hazard Communication labeling requirements do not apply. All units of the above named anti-serums have been treated for HbsAG and HTLV-III, and have been found to be negative. These serums are tested on an ongoing basis for these antibodies. Good laboratory practice is of course recommended, and with normal precautions on the handling of biological materials, adequate protection should be expected.
